DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 8, 16-17 and 21-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Igari (JP404026226A).

Regarding to claims 1, 8, 16-17 and 21, Igari discloses a switch matrix and a method of scanning the switch matrix, comprising: a plurality of row conductors; a plurality of column conductors, each of row conductors and each of the column conductors are capable of being driven with a predetermined voltage level and are capable of being read therefrom a voltage level (see abstract); a plurality of witching elements connect to the row conductors and column conductors, wherein a total number of the switching elements exceeding a number obtained by multiplying together a number of row and column conductors (see Fig. 2); and means for detecting a closure of a first of the switching elements based on a presence of the predetermined column voltage level during monitoring of the row conductors, and means for detecting a closure of a second one of the switching elements based on a presence of the predetermined row voltage level during monitoring of the column conductors (see abstract). Igari further discloses some of he plurality of witching elements are implemented to allow current to flow bi-directionally therethrough (SW1, SW2, SW3 ...

Art Unit: 2675

Fig. 2), and others of the plurality of switching elements are restricted to allow current to flow only in one direction therethrough (SW10, SW11, SW12 ... Fig. 2).

Regarding to claim 22, Igari further discloses connecting three diodes in each column, but only one diode voltage drop is switchably connected between each row conductor and each column conductor (Fig. 2).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4-6, 9-10, 14-15, 18-20 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Igari in view of applicant's admitted prior art.

Regarding to Claims 4-6, 9-10, 14-15, 18-20 and 23, Igari discloses a switch matrix and a method of scanning the switch matrix, comprising: a plurality of row conductors; a plurality of column conductors, each of row conductors and each of the column conductors are capable of being driven with a predetermined voltage level and are capable of being read therefrom a voltage level (see abstract); a plurality of witching elements connect to the row conductors and column conductors, wherein a total number of the switching elements exceeding a number obtained by multiplying together a number of row and column conductors (see Fig. 2); and means for detecting a closure

Application/Control Number: 09/428,468 Page 4

Art Unit: 2675

of a first of the switching elements based on a presence of the predetermined column voltage level during monitoring of the row conductors, and means for detecting a closure of a second one of the switching elements based on a presence of the predetermined row voltage level during monitoring of the column conductors (see abstract). Igari further discloses some of he plurality of witching elements are implemented to allow current to flow bi-directionally therethrough (SW1, SW2, SW3 ... Fig. 2), and others of the plurality of switching elements are restricted to allow current to flow only in one direction therethrough (SW10, SW11, SW12 ... Fig. 2).

Igari may not explicitly disclose the use a momentary (temporary) and persistent switching elements in the switch matrix. However, the admitted prior art disclose that the momentary and persistent switching elements are conventional switching elements (see page 1 of the specification). Thus, it would have been obvious to one ordinary skill in the art to use the conventional momentary (temporary) switching elements and persistent switching elements in Igari's switch matrix. This would have been obvious because Igari does not disclose using any specific switch element in the switch matrix.

Regarding to claim 24, Igari further discloses connecting three diodes in each column, but only one diode voltage drop is switchably connected between each row conductor and each column conductor (Fig. 2).

Response to Arguments

5. Applicant's arguments filed 3/8/04 have been fully considered but they are not persuasive.

Page 5

Applicant is correct that Igari teaches connecting three diodes in each column in

Fig. 2. However, Igari further teaches only one of the three diode is switchably

connected between each row conductor and each column conductor (see Fig. 2).

Therefore, it clear that Igari teaches switchably connecting only one diode voltage drop

between each row conductor and each column conductor.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Dennis-Doon Chow whose telephone number is 703-305-4398.

The examiner can normally be reached on 8:30-6:00, Alternate Monday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Steve Saras can be reached on 703-305-9720. The fax phone numbers for the

organization where this application or proceeding is assigned are 703-872-9314 for regular

communications and 703-872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-306-0377.

D. Chow
